

TASE 2010 Foreword

Welcome to TASE 2010, the Fourth IEEE International Symposium on Theoretical Aspects of Software Engineering.

TASE is forum for the presentation and discussion of new fundamental ideas in software engineering of large-scale systems. Software engineering of such systems has usually been viewed as the study of principles, guidelines, and empirical rules. To manage the complexity of large-scale software projects, various theories have been proposed. Such theories focus on, but are not limited to, the following subjects:

- Real-Time and Embedded Systems
- Semantics
- Model Checking
- Specification and Security
- Software Testing
- Software Models
- Verification
- Concurrency.

The past three TASE symposiums were successfully held in Shanghai (2007), Nanjing (2008), and Tianjin (2009). This year the symposium takes place in Taipei.

The TASE 2010 program includes 22 regular and tool papers and short presentations. We are grateful to our invited speakers, Jean-Raimond Abrial from ETH Zurich and Michael Gerard Hinchey from the University of Limerick, Ireland.

We would like to thank our sponsors:

- National Taiwan University, Taiwan
- Research Center for Information Technology Innovation , Academia Sinica, Taiwan
- Institute of Information Science, Academia Sinica, Taiwan
- National Science Council, Taiwan
- Ministry of Education, Taiwan
- IEEE Computer Society.

We would also thank our external reviewers for the special efforts made to help review and select the program for TASE.

Farn Wang

TASE 2010 General Chair

Jing Liu, Doron A. Peled, and Bow-Yaw Wang

TASE 2010 Program Co-Chairs
